

The One-Wave Times

Dark Matter, Gravity, and the Higgs Field: One Field or Three Names?

The compression-ring foundation gets a real home and an equally real burden of proof.

YELLOW FIELD SCAFFOLD / GREEN PHYSICAL IDENTITY

One field, three readings

A-115 gives one load-bearing home to the proposal that gravity, dark-matter behavior, and Higgs-like resistance are different measurements of one displaced compression field.

LOCAL READING

A directional compression gradient is read as gravity.

EXTENDED READING

A distributed wake or compression ring is read as dark-matter behavior at galactic scale.

BOUNDARY READING

Resistance to carrying a bounded recurrence is read as Mass Effect; finite work to its Mirror flip is read as the 125 GeV boundary response.

The return channel

The expressive counterpart is proposed as white-hole/quasar-scale ejection. The outward counterpart is White Energy: quasar/white-

hole-scale release and reinjection. It is circulation in a static universe, not expansion of space.

Verdict: The unified architecture is load-bearing inside One-Wave, but its coefficients and galaxy, static-redshift, neutrino-return, and White-Energy predictions remain open. One mechanism is cleaner than three only if it predicts all three.
